

5 reasons why your data is secure in our cloud

KASSENSTURZ ^{CH}

1 One of the safest providers

Google is one of the safest providers on the market, according to the Swiss Kassensturz and the German Stiftung Warentest. Users can decide for themselves which data they want to use and share.

2 ISO-certified

The security and data protection controls are regularly checked by independent third parties. Google has all the necessary ISO certificates. The 27001 series stands for Information Technology and Information Security Management System Requirements.

- ISO 27001** Managing information risks
- ISO 27017** Controlling cloud-based information security
- ISO 27018** Protecting personal data

3 Servers in Germany and Switzerland

Our servers in Germany are hosted according to GDPR. Switzerland is also one of the safest countries for data storage. You alone decide on which of our servers you want to store your data.

4 USA offline

At no time will any data be transferred to the United States.

5 GDPR

Google Cloud is contractually committed to putting the security and privacy of user data first. Compliance with the GDPR is strictly monitored.
